## DETAILED ACTION

### ***Response to Arguments***

Applicant's arguments with respect to claims 1-6 have been considered but are moot in view of the new ground(s) of rejection.

Despite applicant's disagreement, the examiner decides to provide new rejection as below. Other references have been incorporated to strengthen the examiner's position with respect to the brightness controlling apparatus.

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Gershfeld (U.S. Patent number 6,091,447).

Regarding claim 1, Gershfeld discloses a brightness controlling apparatus comprising: an evaluator (26) for detecting a feature of a certain window displayed on a screen of a display unit; and

a display controller (20) for controlling the brightness of said screen of said display unit according to said feature of said window, detected by said evaluator (Figs. 1 and 4, col. 5, lines 1-67).

***Allowable Subject Matter***

3. Claims 2-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

None of the prior art teaches the apparatus wherein evaluator detects a type of application to be displayed in the window, and the display controller controls the brightness of the screen of the display unit according to the type of the application software detected by the evaluator.
